Course Name: Python Programming

Course Faculty: Dr.Samson Ebenezar

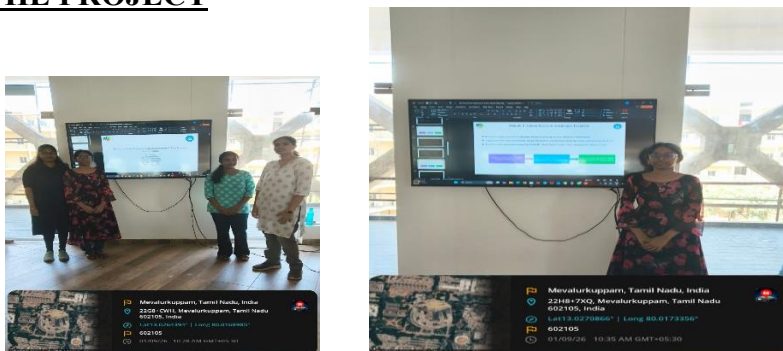

Project Title:QR CODE BASED EVENT REGISTRATION SYSTEM

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

MODULE PHOTO

INDIVIDUAL CONTRIBUTION PRESENTATION IMAGE MODULE WORK IN THE PROJECT

PROJECT DESCRIPTION: SOLUTION DESIGN - MODULE 3

The Admin Roster & Attendance Telemetry module provides organizers with a secure dashboard to monitor participant registration and attendance in real time. Access to the telemetry panel is protected by a master passcode. The module calculates and displays the total number of registered teams, checked-in teams, total participants, and participants currently inside the venue. It also presents a live roster containing the **Ticket ID, Team Name, Leader Name, Team Size, Domain, and Ingress Status**.

The module uses the SQLite database to retrieve participant records and Python functions to calculate attendance statistics. Unauthorized users are prevented from viewing the roster and telemetry information.
